

ARIAGENT

The proactive financial companion that Protects, Grows, and Guides.

Most banking AI waits for you to ask. Ariagent watches your financial life and acts first — and shows you exactly why, every time.

GUIDE

Theme: Digital Engagement (Problem Statement #3)

Project: Ariagent

THE PROBLEM

Digital banking engagement is reactive — and shallow

Banks spend heavily on apps, yet the app is a destination the customer must choose to visit — and when they do, it only answers questions they already knew to ask.

Harm goes uncaught

Overdrafts, forgotten subscriptions and fraud are noticed after the money is gone.

Opportunity is missed

Idle balances and income changes sit unaddressed; the customer never gets ahead.

Big moments unsupported

A baby, a new home, a job change — the bank is silent because no one filled a form.

Generic push notifications don't fix this — they're untimed, impersonal, and quickly muted. **The missing capability is judgment.**

THE IDEA

Ariagent — one agent engine, three engagement modes

A continuous agentic loop — **Sense → Reason → Decide → Act → Explain** — run over three classes of signal.

PROTECT

Detects: Threats

Forecasts overdrafts, catches duplicate subscriptions & fraud — reaches out before harm.

“Your rent debits before your salary lands — shift it?”

GROW

Detects: Opportunities

Detects idle cash and income changes — puts money to work.

“Your salary rose ₹15k — auto-invest ₹5k/month?”

GUIDE

Detects: Life events

Recognises life events from spending — orchestrates multi-step journeys.

“A baby is coming — let's set up cover + savings, step by step.”

Not a chatbot. Not a rules engine.

- **Autonomous & proactive** — It initiates — the customer doesn't. Engagement is a loop, not a notification feed.
- **Reasons & prioritises** — The Orchestrator decides which signal deserves attention now, holds back low-value nudges, and interleaves slow journeys with urgent alerts. It will stay silent to avoid spam — that judgment is the product.
- **Accountable** — Every recommendation carries a visible reasoning trace, and every action is suitability-checked, consented, reversible, and audited.

THE LOOP

Sense

Sentinel

Reason

Insight

Decide

Orchestrator

Act

Action

Explain

Engagement

Five agents, two pluggable libraries

One shared pipeline. Adding a mode = registering more detectors and actions — not a new system.

SIGNALS	txns · balances · recurring debits · merchants · goals
SENTINEL	Sense — runs detector library across all 3 modes → typed signals
INSIGHT	Reason — score relevance · urgency · confidence · intent
ORCHESTRATOR	Decide — prioritise · suppress spam · sequence journeys
ENGAGEMENT + ACTION	Explain the nudge + reasoning trace · execute guarded banking tools
GUARDRAILS	suitability · consent · reversibility · full audit log

THE DEMO

Priya, 29 — one 60-day timeline, all three modes

Just got a ₹15k raise — and her spending quietly reveals she's pregnant, before she'd ever fill a form.

Day 3	PROTECT	Rent debits before salary lands → overdraft forecast	→ Shift the debit date (one tap)
Day 8	PROTECT	Two subscriptions for the same service	→ Cancel the duplicate
Day 14	GROW	Salary +₹15k for 2 months, surplus idle	→ Start a ₹5k/mo SIP
Day 22	GUIDE	Prenatal-clinic pattern → baby life event	→ Launch the “New Baby” journey
Day 27	ORCHESTRATOR	A low-value Grow nudge is suppressed (2 higher items pending)	→ Nothing fires — shown in the log

Judgment you can see

Visible reasoning

Every card shows its “why”: salary +₹15k × 2 months → ₹9k recurring surplus → SIP. Trust the black box can't earn.

Restraint (anti-spam)

The Orchestrator deliberately suppresses lower-value nudges. A rule engine fires on every match — an agent decides not to.

Compliance by design

Suitability, consent, reversibility and audit are built in — the credibility a regulated domain demands.

The money shot for judges: watching the agents reason in real time — and the Day-27 moment where Ariagent chooses to stay silent.

Every mode is a revenue lever

PROTECT

Retention + NII + lower servicing

Buffer credit / overdraft lines · fewer NSF complaints · churn ↓

GROW

AUM + fee income + deposit stickiness

SIPs · mutual funds · high-yield sweeps

GUIDE

Cross-sell bundles (highest ₹/event)

Insurance + investment + savings, sold at the moment of need

Platform multiplier: the same engine powers Customer Acquisition (#1) and Digital Adoption (#2) — one architecture answers all three problem statements. Sold B2B2C to banks (per-active-user) + cost-avoidance, expanding to revenue-share.

One north star, balanced against spam

NORTH STAR

Proactive Actions Accepted / active user / month

GUARDRAIL METRIC

Nudge acceptance rate ↑ & opt-out rate ↓

PROTECT drivers

overdrafts avoided · fraud caught · ₹ saved · churn ↓

GROW drivers

surplus activated (₹ moved to productive) · SIPs started · AUM ↑

GUIDE drivers

journeys started → completed · products per journey · cross-sell ratio ↑

Privacy-first, runs on no budget

Frontend

Next.js + React + Tailwind — live dashboard: timeline, action cards, streaming reasoning traces

Backend

Python FastAPI — agent pipeline, signal bus, audit log; SSE streams reasoning to the UI

Agent engine

Ollama + Qwen2.5 (local, free, private) · provider-agnostic — one-line swap to a hosted model

Data

Synthetic transaction generator (the Priya scenario) · SQLite → Postgres

Guardrails

Cross-cutting compliance: suitability · consent · reversibility · audit

Hybrid by design: forecasting & suppression thresholds run as deterministic code — the model handles language & classification. Financial data never leaves the host; the same stack runs in a bank's own VPC.

The trust ladder

Autonomy in a regulated domain is earned in stages, not switched on.

TIER 1 — Suggest

Ariagent recommends; you approve in one tap.

Today's demo

TIER 2 — Standing rules

Pre-authorise a class of action within limits (“always shift my debit if I'd overdraft”).

Next

TIER 3 — Pulse (autopilot)

Full delegation; Ariagent manages idle money continuously + a weekly “what I did & why” explainer.

Vision

ARIAGENT

Engagement becomes something the bank **does for** the customer — not something it sells.

Protects, Grows, and Guides on one agent engine · suggests today, earns autopilot tomorrow · proves its trustworthiness by showing its reasoning on every action.
